

An FDA-cleared approach that works to lose stubborn fat?

THAT'S COOL

Let's talk about how to freeze away fat with the CoolSculpting® treatment.

- Nonsurgical
- Little or no downtime

#1 nonsurgical fat reduction treatment*

Model. Not an actual patient.

*CoolSculpting® is the treatment doctors use most for nonsurgical fat reduction.

Results and patient experience may vary.

The CoolSculpting® procedure is FDA-cleared for the treatment of visible fat bulges in the submental area, thigh, abdomen and flank, along with bra fat, back fat, underneath the buttocks (also known as banana roll), and upper arm. It is also FDA-cleared to affect the appearance of lax tissue with submental area treatments.

During the procedure, you may experience sensations of pulling, tugging, mild pinching, intense cold, tingling, stinging, aching, and cramping at the treatment site. These sensations subside as the area becomes numb. Following the procedure, typical side effects include temporary redness, swelling, blanching, bruising, firmness, tingling, stinging, tenderness, cramping, aching, itching, or skin sensitivity, and sensation of fullness in the back of the throat after a submental area treatment. Rare side effects may also occur. The CoolSculpting® procedure is not for everyone. You should not have the CoolSculpting® procedure if you suffer from cryoglobulinemia, cold agglutinin disease, or paroxysmal cold hemoglobinuria. The CoolSculpting® procedure is not a treatment for obesity. Ask your doctor if CoolSculpting® is right for you. To learn more about what to expect, visit coolsculpting.com.
